

# Making HAESL Greener

**M**aking HAESL greener is one of HAESL's environmental strategies to contribute to the carbon credits and reduce our negative impact to the environment. There is no doubt that planting more greenery in HAESL can definitely improve air quality and bring a better working environment to every HAESL individual. Realizing the benefits of plantation, HAESL is going to launch two campaigns to make HAESL GREENER. First campaign is the HAESL Green Wall and the second one is One Man One Plant Campaign.

## 1. HAESL Green Wall

HAESL is dedicated to providing a greener and better working environment to every HAESL staff. A Climbing plant (Boston Ivy) is proposed to be planted on the wire mesh panels between the HAESL Test Cell and HAECO facility. Staff can feast their eyes on this splendid green wall at the HAESL premises in the near future.

## 2. One Man One Plant Campaign

Company sponsored indoor pot plants will be given to staff who are willing to take care of plants in the office and donate \$10 to the green NGO. It aims at encouraging every office staff to cultivate a habit of keeping an indoor pot plant in an attempt to improve the indoor air quality.

The green NGO we have chosen is called the “Hong Kong Green Nature Union” (HKGNU). It aims at encouraging people to appreciate, protect and treasure our natural environment. It organizes the International Million Trees (Forest) project in the Hong Kong region every year. We hope that our donations can help further reduce carbon footprint by supporting afforestation in Hong Kong. There are three types of plants available for our colleagues and they are Watermelon Peperomia, African Violet and *Dracaena Deremensis* ‘Lemon Lime’ .

We hope that all of you can participate in this event and enjoy a greener HAESL!
